# Anaconda3 5.1.0 (64-bit) Setup

## Advanced Installation Options
Customize how Anaconda integrates with Windows

### Advanced Options

**1** ☑ Add Anaconda to my PATH environment variable

Not recommended. Instead, open Anaconda with the Windows Start menu and select "Anaconda (64-bit)". This "add to PATH" option makes Anaconda get found before previously installed software, but may cause problems requiring you to uninstall and reinstall Anaconda.

☑ Register Anaconda as my default Python 3.6

This will allow other programs, such as Python Tools for Visual Studio PyCharm, Wing IDE, PyDev, and MSI binary packages, to automatically detect Anaconda as the primary Python 3.6 on the system.

**Note:** You should use anaconda environment in order to view jupyter notebooks. You can either navigate to the right directory or upload the notebook using the upload button in your anaconda environment.
